

M6A2: Final Project Wireframes

Screen Map

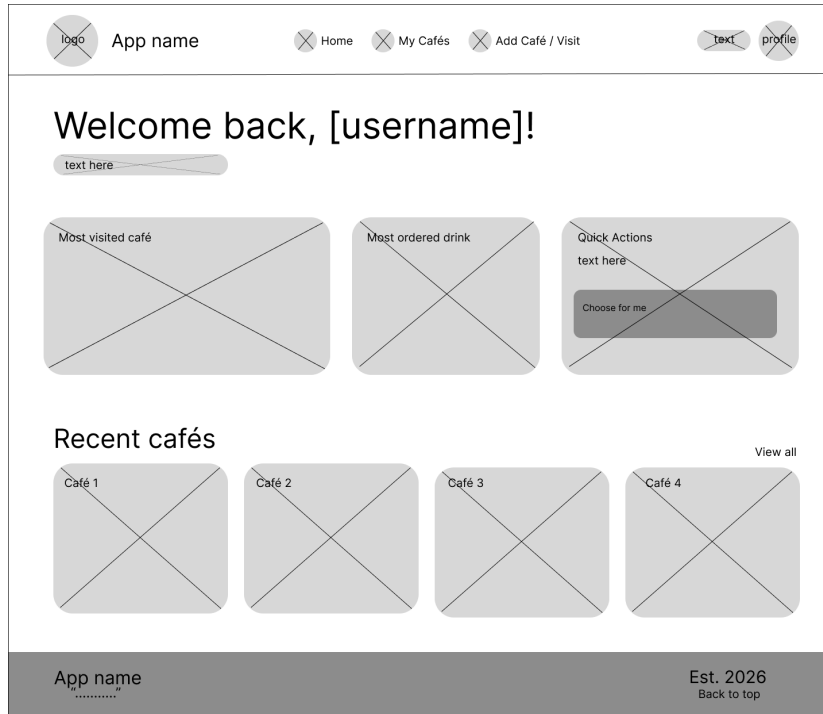

- **What is the first screen the user lands on?**
 - The home page.
- **Is there a "home base" most others return to? (That is your nav.)**
 - The navbar, which is seen on every screen.
- **Any screen with no way back? That is usually a bug in the plan, not just the app.**
 - None. Café Details has a Back button, and the popup has Cancel or Save.

Break it into a component tree

App	owns: cafes, status, user
└─ AppLayout	
└─ NavBar	owns: isMenuOpen (phone)
└─ NavLink × 3	(Dashboard, My Cafés, Add Café)
└─ Avatar	(links to Profile)
└─ HamburgerMenu	(phone only)
└─ MyCafesPage	owns: search, filters, isChooseOpen
└─ PageHeader	(title, count, Choose for Me Button)
└─ SearchBar	
└─ FilterBar	(rating, price chips, tag chips)
└─ CafeGrid	
└─ CafeCard × n	key = cafe.id
└─ EmptyState	(when no cafés match)
└─ ChooseForMeModal	owns: pickerFilters, pickerResult
└─ PreferencesView	
└─ ResultView	(CafeCard, View Café, Pick Again)
└─ Footer	(name, est. 2026, Back to top)

Level	Components
Atoms	Button, Input, TextArea, Chip, Tag, StarRating, PriceLevel, ProgressBar, Icon, Avatar, NavLink
Molecules	SearchBar, FormField, ChipGroup, ModeToggle, CafeCard, OrderRow, VisitItem, StatCard, LevelBadge, EmptyState
Organisms	NavBar, HamburgerMenu, Footer, PageHeader, FilterBar, CafeGrid, ChooseForMeModal, Modal (shell), CafeForm, VisitForm, OrderList, MapSearch, CafeSelect, VisitHistory, LevelLadder
Page / Layout	AppLayout, DashboardPage, MyCafesPage, AddCafePage, ProfilePage, CafeDetailsPage

Sanity Check

Main task: Log a visit to a café

- **Path 1 - From Add Café:**
 1. Add Café – user selects “Add a Visit.”
 2. Add a Visit – user selects an existing café and enters the visit date, orders and notes.
 3. Save Visit – the visit and orders are saved.
 4. Café Details – user is taken to the selected café’s details page, where the new visit appears in the visit history.
- **Path 2 - From an Existing (Saved) Café:**
 1. My Cafés – user selects a café
 2. Café Details – user clicks “+ Add a visit.”
 3. Add a Visit – the café is already selected; the user enters the date, orders, and notes.
 4. Save Visit – the visit and orders are saved.
 5. Café Details – the new visit appears in the café’s history.

Both paths reach the same result without requiring an unplanned screen. The required state (cafes, visits, orders, form entries, etc.) has an appropriate component or page that owns it.
