
M6A3: Final Project Design System**My Styling Approach**

CSS Modules / plain CSS, because it keeps the styling simple and allows reusable design tokens through CSS custom properties.

Color Tokens

Token	Role	Color (hex)
--color-primary	buttons, links, active nav, focus ring, body text and headings	#33231A 
--color-accent	one call to action (choose for me), star icons, highlights	#C68B45 
--color-accent2	tags, progress bar, level badge	#6F8250 
--color-bg	page background	#FBF8F2 
--color-surface	cards, panels, inputs, popup	#FFFDF9 

Check contrast ratio (every text-on-background pair reaches at least 4.5:1 contrast)

Text	Background	Ratio	Remarks
--color-primary	--color-accent	5.14:1	Pass
--color-primary	--color-bg	14.19:1	Pass
--color-primary	--color-surface	14.8:1	Pass

Type Scale

Style	Size	Weight	Used for
Heading	28px	Bold	screen and section titles
Body	16px	Regular/ Bold	paragraphs, lists, inputs, buttons, café details, and card & section titles
Small	13px	Regular	captions, labels, tags, chips, footer

Type scale example

Heading 28px Bold Welcome back, user! Café MMs
Body 16px Regular Bold Very quiet, good for studying. Save. Cancel
Small 13px Regular Study. Aesthetic. (tags) Pick & Sip - Est. 2026

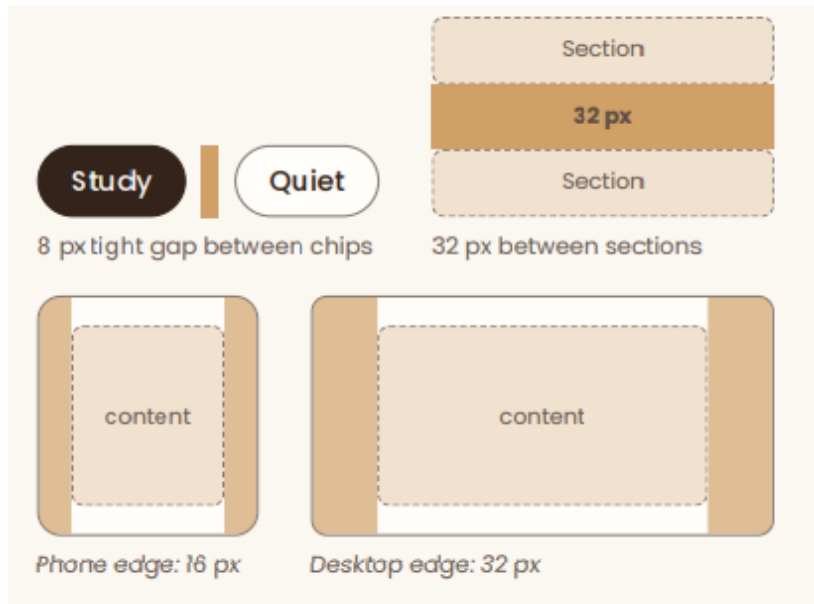

Spacing Rule

--space-half	4 px · icon next to text only
--space-1	8 px · tight , related items
--space-2	16 px · card padding, form gaps
--space-3	24 px · between blocks in a page
--space-4	32 px · standard , between sections
--space-5	48 px · above the footer

Screen edge padding: 16px on phone, 32px on desktop

Radius: 8px inputs and images, 16px cards and popup, pill for buttons, chips, and tags

Spacing rule example

Reusable components

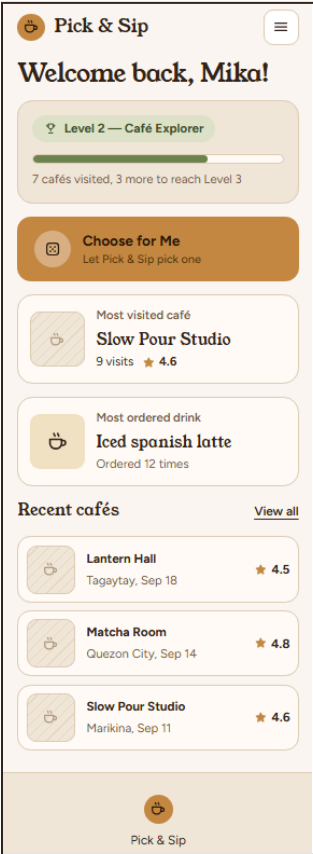

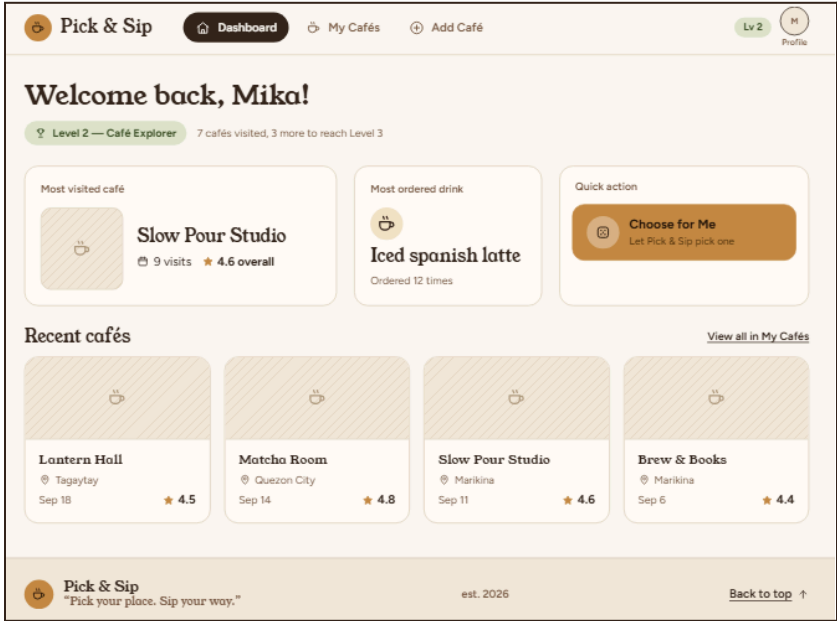

Component	Level	Appears on	Props it takes
Button	atom	Everywhere	variant, size, onClick, children
Chip / Tag	atom	My Cafés, Add Café / Visit, Café Details, Choose For Me	label, selected, onClick
StarRating	atom	CafeCard, Café Details, Add Café / Visit, Choose for Me	value, onChange, readOnly
ProgressBar	atom	Home, Profile	value, max
NavLink	atom	NavBar	to, label, active
SearchBar	molecule	My Cafés	value, onChange, placeholder
CafeCard	molecule	Home, My Cafés, Choose for Me result	cafe, onClick
LevelBadge	molecule	Home, Profile	level, progress
FormField	molecule	Add Café / Visit, Profile	label, value, onChange, error

NavBar	organism	Every screen	activeRoute, user
Footer	organism	Every screen	– (static)
ChooseForMeModal	organism	My Cafés	isOpen, onClose, cafes

Responsive Plan

Breakpoint	Width	Design Changes
Mobile	below 768 px	NavBar collapses to a hamburger menu, cards and forms stack to 1 column, filter chips wrap
Desktop	768 px and up	NavBar shows Home / My Cafés / Add Café inline, plus avatar, CafeGrid sits across (2-3+), forms two columns

Sample images

Accessibility Check

- Text has enough contrast against the background. Accent colors are not used for text.
- HTML: Use proper elements like header, nav, main, footer, button, and a.
- Add alt text to meaningful images. Decorative icons do not need alt text.
- Every form input has a matching label.
- Use clear font sizes and avoid text that is too small to read.
- Buttons use clear labels such as “Save Visit,” “Add Visit,” and “Choose for Me” so users understand what each action does.
- Important information is not communicated through color alone. For example, ratings also show a number or stars, not just a color.
- The app remains usable on smaller screens without horizontal scrolling.
